EDUCATION

DKTE's Engineering & Technology Institute

India

Bachelor of Technology in Artificial Intelligence & Data Science

Aug. 2021 – May 2025

- CGPA: 7.3/10
- Relevant Coursework: Machine Learning · Deep Learning · Computer Vision · Natural Language Processing

EXPERIENCE

Data Analyst Intern

2024

Cognifyz Technologies

Remote

- Cleaned, preprocessed, and analyzed 10,000+ structured sales and customer records using Pandas and NumPy, improving data quality by **25%**; documented reproducible workflows via modular Python scripts and Git.
- Designed and implemented automated data ingestion pipelines via Python-based web scraping across 8 platforms, collecting and preprocessing 5,000+ records; integrated pipelines with REST APIs for seamless data flow.
- Conducted exploratory data analysis (EDA) to surface customer behavior trends, translating insights into actionable business strategies for finance and sales teams.

PROJECTS

LLM-Based Agentic Q&A Application | Python, LangChain, LangGraph, FAISS, Gemini API, FastAPI 2024

- Architected a **hierarchical multi-agent pipeline** coordinating specialized sub-agents (Research, Analysis, Editor) using LangChain and LangGraph, enabling plan-and-execute agentic orchestration for scalable AI workflows.
- Implemented **RAG pipeline** with FAISS vector store and REST API tool use, grounding LLM responses in factual context and reducing hallucinations for task-sensitive use cases.
- Engineered structured prompt engineering with **self-reflection feedback loops** to score LLM outputs, detect hallucinations, and iteratively refine responses — directly applicable to prompt quality assurance.
- Deployed end-to-end via **FastAPI** backend with Streamlit UI; used Claude Code and GitHub Copilot throughout development to accelerate vibe coding and reduce iteration time.

Fruit Quality Detection & Price Estimation | Python, TensorFlow, OpenCV, Flask

2024

- Built and trained a CNN-based image classifier achieving **92% test accuracy** across 6,000+ images using Computer Vision techniques; engineered end-to-end ML pipeline with data preprocessing, augmentation, and hyperparameter tuning.
- Improved model performance by **15%** through systematic experimentation; evaluated with confusion matrix and classification metrics. Awarded **Best Project Award** at institute level.

TECHNICAL SKILLS

Languages: Python, C++, Java, SQL

AI & Agentic Frameworks: LangChain, LangGraph, LlamaIndex

LLM & GenAI: Anthropic Claude, OpenAI GPT, Google Gemini API, Prompt Engineering, RAG

Vector Databases & Embeddings: FAISS, ChromaDB, Pinecone, Weaviate, Semantic Search

ML & Deep Learning: TensorFlow, PyTorch, Scikit-learn

Data Handling: Pandas, NumPy, EDA, Feature Engineering

Model Deployment: FastAPI, Flask, REST APIs, Streamlit

AI Dev Tools: Warp, GitHub Copilot, Cursor

Automation: Zapier, n8n, Make

Cloud & Tools: AWS, GCP (Vertex AI), Git, GitHub, Jupyter Notebook, Google Colab

CERTIFICATIONS

Machine Learning Specialization

2025

Stanford University / DeepLearning.AI

ChatGPT Prompt Engineering for Developers

2025

DeepLearning.AI

Machine Learning Crash Course

2024

Google for Developers
